# Internet för alla

Members by region, April 2011

# Core Values

- **The quality of life** for people in all parts of the world is enhanced by their ability to enjoy the benefits of an open and global Internet.
- **Well-informed individuals** and public and private policy makers are the essential foundation of an open and global Internet society.
- **The genius of the Internet** is that its decentralized architecture maximizes individual users' power to choose (or create) and use the hardware, software, and services that best meet their needs, and if the Internet is to continue to be a platform for innovation and creativity, its open, decentralized nature must be preserved.
- **Enduring and sustainable progress** toward our vision is best achieved by a combination of global initiatives and activities at a local level that engage people in their home regions.
- **Technical standards and Internet operating procedures** should be developed and asserted through open and transparent processes, with minimal barriers to participation or access to information.
- **The social, political, and economic benefits** of the Internet are substantially diminished by excessively restrictive governmental or private controls on computer hardware or software, telecommunications infrastructure, or Internet content.
- **Rewarding and productive** use of the Internet depends on the ability to trust critical services.

# Före 1992

- 1971, det första e-postmeddelande skickades via Arpanet, föregångaren till dagens globala internet
- 1986 Björn Eriksen registrerar .se
- 1990 Tim Berners-Lee och Robert Caillau uppfinner World Wide Web
